

Dear Abby:

I have a potentially sensitive question. My husband and I have enjoyed a rich and varied sex life: just about everything from missionary position on my side of our bed all the way to missionary position on his side of our bed. However, he keeps asking me to suck on his cock. I'm curious to try it, but I'm nervous – I've never done it before, and I'm afraid I'll be a disappointment. Could you please give me any tips?

Signed,

Never Actually Sucked That Yet

Dear NASTY:

Don't get discouraged. Sucking cock is not something we're just born knowing how to do...even Dear Abby wasn't quite sure how to do it at one point, as difficult as it may seem to believe.

First, make sure you are in the right mood to suck his cock. Foreplay is always a good thing...encourage him to play with the parts on your body that turn you on the most, and get you in the best mood to try it. Even though you will likely find this very pleasurable as well, this is something he has been asking you to do. If he is not willing to return the favour and satisfy you sexually, he does not deserve your adventurous spirit.

When you're ready to give it a try, straddle over him, and kiss his mouth. Nibble down his neck, and explore his manly chest for a while with your lips. His cock should be getting harder by the moment, both because of how good your kisses feel as well as the anticipation of what you are about to do. Don't be afraid to tease a bit...kiss that happy trail between

his belly button and his crotch, kiss his hips, nibble a bit on his inner thighs.

Finally, take his penis into your mouth. If it isn't completely hard yet, do not despair. Suck on it gently, and run your tongue up and down the shaft. It should stiffen. Moan with pleasure as it gets harder in your mouth. People love positive feedback, and some well-placed sounds will assure him that you're enjoying his body, and cause him to get even more turned on.

Once he is hard inside you, your goal is to keep it that way. Vary your technique so it doesn't get monotonous...switch out how fast you take his cock into and out of your mouth. Move your tongue around. Alternately tease him by taking his penis shallowly in your mouth, and satisfy him by letting it thrust as far down your throat as you can take.

One thing to be careful about is your jaws. Unless you are a regular contestant in the Nathan's Famous (G-Rated) Hot Dog Eating Competition, or your beau's equipment is comparable in size to a baby carrot, your jaw is going to get tired very quickly this first time. Do not despair; there is plenty to keep him busy while you prepare yourself to take another throatful of his hard, throbbing cock. Stroke his penis a bit, and kiss down from the head of it to his balls. Be gentle, but not too gentle; many men enjoy it when you suck on their testicles just a little bit. Keep stroking his cock as you do. If your jaw is still tired once he has had enough stimulation on his balls, feel free to kiss and nibble a little bit on his thigh. However, practice makes perfect; the more practice you get sucking his cock, the longer you will be able to go without your jaw getting tired, and the deeper you will be able to comfortably take him.

If you feel his already hard cock get ever-so-slightly stiffer in your mouth as you suck it, you know you are doing the right thing. Whatever motions you are doing with your head, your mouth, your tongue...keep doing them. All his muscles nearby will tighten up, his cock will feel bigger and more engorged than ever, and finally he will come straight down your throat. It is your choice whether to spit or swallow, although Abby never turns down a good opportunity to swallow. The salty deliciousness of your lover's pleasure is not something you will taste anywhere else, and it would be a shame to miss out.

Good luck!

Yours,

Abby
